Instructions: In the ER virtual gaming simulation, you assumed the role of a nurse Nicola Sporoli assigned to do an assessment on Jason. Jason came in after a soccer injury. In reflecting on this virtual gaming simulation, we would like to ask you a number of questions in relation to your experience while engaging in the simulation.
There are 9 questions to be answered. It will take you up to 60 minutes to complete the questions. We encourage you to use your simulation summary report (analytics) to support your reflection.
These questions will guide you through a facilitated reflection on your virtual gaming simulation experience. The questions will help you express your reactions, analyze issues, reflect on your performance and make connections to future clinical practice.

1.   What are your thoughts and feelings while playing the emergency virtual game?

2.   Did you play the game more than once and if you did, how was this helpful to you?

3.   How did you feel in the role of the nurse Nicola Sporoli during this simulation?

4.   Share what you learned in relation to assessing Jason after a traumatic injury.

5.   Not everyone works their way through this scenario perfectly. What can you take away

        from the incorrect decisions/responses you may have made?

6.   As you worked your way through this simulation, did you find yourself going to other

        sources to learn more about emergency care? If you did go to others sources, what types

        of things did you review to help increase your knowledge?

7.   In summary, the learning outcomes were:

        •   The learning objectives of this simulation game are to:
        •   Perform a multi system assessment based on the reason for seeking care
        •   Identify priority actions based on assessment findings
        •   Identify abnormal findings that require immediate action
        •   Practice documenting a patient encounter

        What were your key learning points?

8.   If a similar situation arose in the future, what will you take away from this simulation to

        incorporate into your clinical practice?

9.   What questions remain unanswered for you in relation to this scenario?
